# VCiR-3P Product Overview (Volatile Corrosion Inhibitor)

[e-mail: hyunjinent@gmail.com]

## **Kyung Sung Chemical Co.**

# Volatile Corrosion Inhibitor Product Cluster

- > VCiR-3P®; V.C.I Powder
- > VCiR-3L®; V.C.I Corrosion Oil

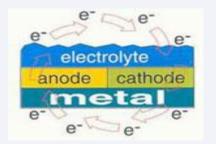

## **♦** As for corrosion

As for corrosion, it has been processing that treatment metals return to natural autoxidation compounds (a raw ore).

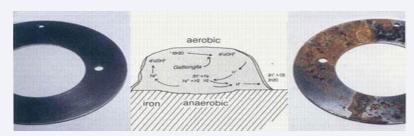

Corrosion is a electrochemical process, that is generally initiated which atmospheric Electrolytes (moisture, oxygen, impurity) settles on the surface of metals.

this atmospheric electrolytes will act as a conductor enabling a flow of electrons between high-energy areas(cathodes) and low-energy areas(anodes). This electrochemical process then results in the visible oxidation referred to as tarnish, corrosion or rust.

## How rusted metals happen

Corrosion is the oxidation of metals reacting with water or oxygen(ex. Fe2O3, Fe3O4). It can be concentrated locally to from a pit or crack, it can extended across a wide area to produce general deterioration.

# ■ As for VCI( Volatile Corrosion Inhibitor)

VCI powders contain chemical formulations that release an invisible and nontoxic corrosion inhibiting vapor into the air. These VCI vapor molecules will be coating on exposed metal surfaces before they are rusted by oxidation impurity or water.

Generally, VCI powders are known to long time effect In normal temperature.

VCiR-3P are Volatile corrosion inhibitor powder for corrosion protection metals and non metals in recessed areas, interior cavities and voids as well as protection on their oxidation and discoloration.

- Appearance : White Powder
- ◆ Purity : 99.8% <</p>
- The ignition temperature : 230°C
- ◆ Solubility : 26wt% at 25°C Water
- ♦ General packing size : Width x Length=70mmx100mm
- ◆ Packing unit : 10g, 20g, 30g , 20kg etc.

( Wanted to customers)

# **VCiR-3P Special Features**

- VCiR-3P powder vaporizes and then protect all metal surfaces, reaching every part of metal surface, including recessed areas and interior cavities.
- Continuation and long time effective : No regeneration required.
- VCiR-3P powder components are composed of non-toxic chemicals that are not included heavy metals or nitrite and phosphate chemicals.
- Little or no surface preparation required.
- VCiR-3P powder can be using in soluble water.

# **VCiR-3P Markets and Applications**

## Application metals

- Iron steel, Cast iron, Brass
- Bronze, Copper
- Cadmium alloy, Nickel alloy
- Magnesium alloy
- Tin, tinned iron, Aluminum alloy
- Plated metals

## **Application fields**

- Tubular structures
- Internal pipe, Vessel
- Engine tanks, Boilers,
  Heater exchangers.
- Turbin, Plant construction.
- Packing metals in varieties of boxes.
- Sensitive moisture of electron articles.
- Packing metals in plastic bags.

### Usage

- It is changed that packing method, service life, packing condition, moisture, temperature, etc.
   Generally, it is used 1m³ per 50~100g.
- Reference applied figures

## Comparison with VCiR-3P of KS-Fine Chem & competitor's (Zerust) product

◆Test method: Prepare test piece as the pictures. Separate the test pieces away from rust preventive powder in the container, and then spray water in cycles. Then check the degree of rust occurrence.

# Test pieces and preparation at the early stage

VCiR-3P KS-Fine Chem powder Zerust powder

## Comparison Analysis Data of VCiR-3P of KS-Fine Chem & competitor's(Zerust) product

VCiR-3P volatile rust preventive powder of KS-Fine Chem (After 3hrs)

Volatile rust preventive powder of Zerust (After 3hrs)

VCiR-3P volatile rust preventive powder of KS-Fine Chem (After 48hrs)

Volatile rust preventive powder of Zerust (After 48hrs)

## Comparison Analysis Data of VCiR-3P of KS-Fine Chem & competitor's(Zerust) product

VCiR-3P volatile rust preventive powder of KS-Fine Chem (After 900hrs)

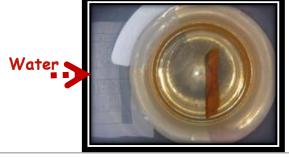

Volatile rust preventive powder of Zerust (After 900hrs)

Performance test for VCiR-3P volatile Corrosion Inhibitor Powder of KS-Fine Chem

(VCiR-3P volatile Corrosion **Inhibitor** Powder Diluted 0.5% with water)

★ Comparison test by diluting VCiR-3P & CORTEC with water, after 900days Volatile Corrosion Inhibitor Powder(Diluted 0.5% with water)

# **VCiR-3P Applied Figures**

		Applied figures		
Packing condition and environment		Standard condition	High temp. and humidity	Unfavorable condition
Entire airtight	indoor	1.0	1.3	1.5
environment	outdoor	1.2	1.5	1.6
Suitable airtight environment	indoor	1.2	1.5	1.9
	outdoor	1.5	1.7	2.4
Breathable air environment	indoor	1.4	1.7	2.3
	outdoor	1.7	2.0	3.5

VCI powder usage method: the volume of packing material(m³) X standard amount(50g) X Applied figures

6. 종합 및 고찰 :

6.1 종 합

시험항목	시험조건	al set ut	시험결과	
108-1	न्य श्री करनी	시험번	상태	기화성방청제
	20±2 °C×90 %RH,	1	녹발생	이상없음
기화성 방청성	20±2 ℃×90 %RH, 20시간 후 0~2 ℃	2	녹발생	이상없음
	주입후 3시간	3	녹발생	이상없음

6.2 고 찰

의뢰된 시료에 대해서 뚜렷이 규정한 시험방법과 절차가 없는 관계로 여러 문헌과 기 화성방청제라는 KS 규격을 참조해 최대한 객관화된 방법으로 시험하고 절차를 명기하

관찰한 결과 기화성방청성 시험에서 상태 시험편은(사진 3, 5, 7) 많은 녹이 발생하였 으나, 방청제을 사용한 시험편(사진 9, 11, 13)에서는 녹이 관찰되지 않으므로, 위의 시 험조건 에서는 방청능력이 있는 것으로 사료됨.

7. 君 圣

> 의뢰된 시료에 대한 시험결과를 종합하면 기화성방청제는 기화(승화)로 인해 금속표면의 부식현상을 억제하는 능력이 있는 것으로 관찰되어짐.
